

“Cool Catherine!”

As one of the company’s senior project managers, Catherine was continually frustrated by the email system ‘going down’. Every time this happened she couldn’t send company email or even receive it from her clients or the contractors. After missing a critical instruction via email during one of these outages, she thought it was time to finally fix the problem.

After speaking with the company’s IT guy Catherine realised she had a solution to these costly interruptions - **MailRevive™**. Once installed Catherine not only had online access to her email

archive but could now send and receive company email regardless of whether the network was up.

Fortunately Catherine’s foresight meant that two weeks later, when the Exchange Server crashed on a Friday afternoon, and the company’s email ‘would be down for hours’, Catherine stayed cool and switched over to her **MailRevive™** webmail.

Just as well because that day Catherine had to make a major tender submission by 5:00pm. By using **MailRevive™** Catherine was able to create the email, attach the tender document and send it off before the deadline, without any interruptions.

How to save your business

MailRevive™ saves companies time and money in meeting commercial, legal and compliance demands of business email, protecting their IP and improving the productivity and knowledge of their employees.

Email Continuity

MailRevive™ at the gateway includes an integrated corporate webmail that enables a standby email interface for staff. Integrating a corporate webmail ensures employees have continuous access to email records and the ability to send and receive email, even when the Exchange Server is down!

How it works!

MailRevive™ is not a replacement for email but operates in conjunction with an existing email gateway or mail server. As it’s transmitted email is filtered, indexed, archived, encrypted and stored automatically. Email users are provided on-demand access to a live archive to enable them to find and recover any of their deleted or old email without the need for any support from the IT department.
