

“Great decision John!”

After John’s company undertook an audit of its corporate messaging systems, at the suggestion of his IT guy, John and the other directors were alarmed to find out that the company’s email retention policy was not sufficient to meet new legal eDiscovery requirements.

Fortunately, this audit was undertaken only two months before a client took them to court for failing to deliver a commercial construction project in accordance with the original specifications and delivery program.

As a result of the technology audit their IT service provider suggested they implement **MailRevive™** with their existing Microsoft® Exchange mail servers which were operating email for more than one hundred people across three offices.

Over the phone John’s IT guy was able to provide their lawyers with online access to the company’s **MailRevive™** live email archive, allowing a complete eDiscovery process to be done within minutes.

So that afternoon John was able to provide his **former client** with a complete copy of email conversations that clearly proved that the disputed approvals had in fact been given by the client.

How to save your business

MailRevive™ saves companies time and money in meeting commercial, legal and compliance demands of business email, protecting their IP and improving the productivity and knowledge of their employees.

Email eDiscovery

MailRevive™ allows end-users and network administrators to perform accurate real-time search of the live messaging archive, while integrated eDiscovery tools allow corporate, regulatory and even legal eDiscovery requests to be executed online, saving your business time and money.

How it works!

MailRevive™ is not a replacement for email but operates in conjunction with an existing email gateway or mail server. As it’s transmitted email is filtered, indexed, archived, encrypted and stored automatically. Email users are provided on-demand access to a live archive to enable them to find and recover any of their deleted or old email without the need for any support from the IT department.
