

“Thanks Tim!”

For many companies Tim, the IT guy, is both ‘the bad news guy’ and ‘a lifesaver’. For Tim, just managing client email systems takes a lot of time and doesn’t make him a lot of profit. Consistently, his clients would ask , "Tim what can we do about all this spam?", "What's the risk of virus?", or "Is our email secure?"

Always keen to keep up with the latest technologies but always too busy Tim asked his friendly technology distributor whether there was a single solution to solve these problems.

Fortunately Tim was informed about the latest Synetek product **MailRevive™**, a fully integrated management tool for business email that included gateway level anti-spam and anti-virus filtering as well as encrypted managed storage.

After trialling **MailRevive™** with its SmartTrust™ feature Tim was certain that adding gateway filtering to his existing clients' network software would finally protect them from email borne threats.

As a bonus Tim’s clients can now also have their corporate email records automatically stored with full data encryption from the network to disk. Not surprisingly a lot of his clients are now smiling and saying “Thanks Tim!”.

How to save your business

MailRevive™ saves companies time and money in meeting commercial, legal and compliance demands of business email, protecting their IP and improving the productivity and knowledge of their employees.

Email Protection

MailRevive™ gateway email filtering ensures the security of business’ network by eliminating spam and viruses before they reach the firewall. By also integrating on-disk encryption in a fully secure and managed environment companies can have complete email protection from a single IT solution, saving on management time and licence fees.

How it works!

MailRevive™ is not a replacement for email but operates in conjunction with an existing email gateway or mail server. As it’s transmitted email is filtered, indexed, archived, encrypted and stored automatically. Email users are provided on-demand access to a live archive to enable them to find and recover any of their deleted or old email without the need for any support from the IT department.
